EXOTIC WOOD FLOORING

The quality of EMSLAND speaks for itself. High quality materials and careful and professional finishing produce a first-class floor. Carefully selected real wood veneer, sealed 5 times with acrylic varnish, guarantees the high resistance-to-wear of our exotic wood flooring. The sturdy 3-layer structure produces a high accuracy of fit. The EMSLAND veneered flooring is more hardwearing than conventional parquetry, is suitable for hot-water floor heating and is also ideal for renovation work thanks to its low height. Thanks to its special coating, the floor is particularly moisture repellent. With lively, powerful and intensive wood shades, the exotic wood flooring makes being at home, and renovating, more of a pleasure. On top of this there is the simple and practical laying – simply click it in and it is ready! EMSLAND exotic wood floors can be laid floating on floor pavement, tiles and linoleum.

STRUCTURE, DIMENSIONS AND CHARACTERISTICS

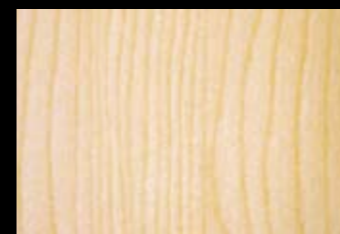

Usable area with high-quality, abrasion-resistant varnishing
 HDF substrate (coated at source)
 Counter Draw
 Cork footstep sound insulation

- Length:** 1.185 mm
